Russian Federation, Samara

SUMMARY

Hi! My name is Albert. I'm beginner front-end developer. I have been studying programming for 9 months. I draw information from various sources: tutorials, blogs, video tutorials, conferences, and, of course, white papers. I decided to go into programming professionally to design and maintain complex systems, and I consider web development to be a promising direction to start in this area. I am attracted by the opportunity to apply rational thinking in my work and at the same time see a concrete result. It is important for me to immerse myself in the process of real development in a team of professionals who are passionate about their work and ready to share their experience, which is why I wrote several applications (and continue to write new ones), which you can find on my [github](#) profile, briefly about them:

- **Tic-tac-toe and todo:** it was from these projects that I began my acquaintance with React and the practical basics of Javascript. These are the simplest applications I wrote in order to learn the basics of React, customizing them by SCSS.
- **Messenger:** front-end part of a web application, is a simplified analogue of a full-fledged messenger. The chat is developed on React + Redux + TypeScript.
- **Cloud Disk:** a front-end part of a simplified analogue of the cloudmail cloud service, developed on the MERN stack (MongoDB, Express.js, React, Node.js.) in order to understand at a basic level how the back-end works and how to work with the database.
- **Website:** a browser-based single page application to showcase my pet projects.

Technical Skills:

- Layout basics: HTML5 (Semantics, Accessibility, Cross-platform, Responsive Web, BEM), CSS3 (I mainly use the Grid+Flexbox combination, I create animations), SCSS (using mixins, loops, conditions and variables), SVG (most often I work with sprites. I can create various simple shapes and animations).
- Programming languages: Javascript (ES5, ES6, DOM, RestAPI, AJAX, Promises, Classes, EventLoop, Objects Oriented Programming),
- Frameworks and Technologies: **React.js, TypeScript, Redux**, Material UI, Axios.
- Web Servers: HTTP, Domain, Server, Postman, Authorization (JWT, Token, SessionStorage, LocalStorage), Basics of Node.js
- Databases: Basics of MongoDB and SQL.
- Testing: Jest, Unit-test, TDD.
- Others: SublimeText, VSCode, Gulp, CRA, Github, ESLint.

LANGUAGES

English

Advanced ●●●●●

EDUCATION

Faculty of Mechanical Engineering,
Metallurgy and Transport

Samara State Technical University

09/2017 - 06/2017

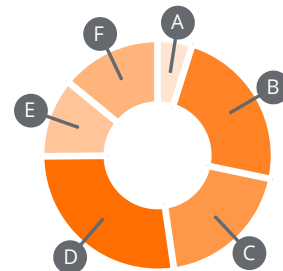

EMPLOYMENT HISTORY

Process Engineer

Aviacor - aircraft factory

09/2021 - Ongoing Russia, Samara

SKILLS

- A HTML
- B CSS
- C JavaScript
- D React + Redux
- E TypeScript
- F RestAPI, HTTP, Domain
